INCORPORATED

TrackAbout is a software system to track, manage and maintain returnable chemical containers and other equipment. It works with smartphones, tablets and rugged handheld scanners to collect container and tracking information by reading barcodes or RFID tags. TrackAbout gives you the tools you need to:

- Know the location of your returnable containers
- Know what *is* in them and what *was* in them
- Access customer balance and turn reports
- Find under-utilized containers and overstocked locations
- Track lot numbers
- Respond quickly to product recalls and regulatory inspections
- Capture proof delivery
- Record container maintenance

These modules meet the needs of most chemical distributors. Options can be customized to meet unique business and operational challenges.

Core Tracking

This is the foundation for the tracking system so you can control and optimize the use of your returnable containers. TrackAbout is delivered by the software-as-a-service (SaaS) model which removes the costly burden of administrative and IT maintenance and provides a faster ROI.

Maintenance

Ensure your containers are available and in safe working condition. Record maintenance, inspection and testing actions performed and generate reports on these activities. Receive alerts when required maintenance is due.

Dynamic Forms

Dynamic paper forms onto your smartphone, tablet or handheld computer to speed processes and insure accuracy. Eliminate incomplete forms or challenges with illegible handwriting or signatures. Customize any pre-built workflow to capture the data you need.

Proof of Delivery

Eliminate paper delivery tickets by giving drivers all the necessary delivery information on the mobile device. Proof of Delivery greatly improves accuracy and minimizes the time and labor of manual data entry.

Bulk Delivery

Never forget to bill a customer. Automate the paperwork involved in bulk deliveries and cut down on paper handling costs. This module includes forecasting abilities to predict when customers will need to be resupplied. Help your dispatchers decide how to organize the deliveries to maximize efficiency without letting your customers run out of product.

Follow-On Tracking

Grant customers controlled Internet access to your TrackAbout system so they can track and view information for containers at their location(s). With your permission, they can also move containers internally. You and your customers get a single, unified view of account information.
